

Basic Poultry Reproduction

Reproductive efficiency is the key to continuous growth in the poultry production industry. In this video, students are introduced to the male and female reproductive tract, fertilization and egg development. The video shows actual footage of the male reproductive tract, the egg being formed in the female tract and explains the natural and artificial breeding practices utilized in today's industry. Students are exposed to industry-based terminology, such as albumen, magnum, oviductal mucous, spermatozoon, acrosome and axoneme. A supplement is included. Collaborator: W.F. Krueger, Ph.D., Texas A&M University. 51 min. CEV10523 (Video) \$89.00

Poultry Selection

Poultry production is one of the fastest growing segments of the animal industry. In fact, career opportunities within the industry are virtually unlimited. This Microsoft® PowerPoint® presentation will teach students how to evaluate many classes of live birds. Students explore the selection factors affecting pullets, laying hens, broiler breeders and broilers. This program should be students' first step in exploring a career in the poultry industry. CEV70096 (PowerPoint) \$79.00

Poultry Processing

View a combination of pictures and graphics illustrating standards, grades, kinds and classes of poultry in this Microsoft® PowerPoint® presentation. Inspection, dressing, handling, and processing (i.e., bleeding, dry picking, hot scalding, wax picking, chilling and eviscerating) procedures are discussed. 38 slides. CEV70055 (PowerPoint) \$69.00
